

AOVET Course—Management of Tibial Plateau Leveling Osteotomy (TPLO)

September 22–23, 2018 Singapore

INTERNATIONAL COURSE CHAIR:

Alessandro Piras

(DVM – Specialist in
Veterinary Surgery, Italy)

REGIONAL COURSE CHAIR:

Mark Glyde

(BVSc MACVSc MVS HDipUTL
DiplomateECVS, Associate
Professor, Small Animal
Orthopaedics, Australia)

Event description

This 2 day course covers the clinical, radiographic and surgical examination of cruciate disease, evidence base for cruciate surgery, rationale and planning for TPLO, the surgical technique and application of locking TPLO, diagnosing and treating meniscal injury, TPLO outcomes and avoiding and managing complications of TPLO. Practical sessions include radiographic planning of TPLO and the surgical technique and application of locking TPLO plates. The 6 practical sessions in this course will facilitate understanding and skill development and will provide an opportunity for discussion of questions, concepts, and problems with course faculty.

Learning objectives

- Able to recognize the clinical and radiographic indications for cruciate surgery
- Be familiar with the evidence base and rationale behind TPLO
- Able to perform surgical planning for TPLO
- Be familiar with the surgical approach for combined stifle joint exploration and TPLO surgery
- Be familiar with performing a tibial plateau leveling osteotomy and applying a locking TPLO plate
- Able to apply their knowledge in managing meniscal injury in cruciate disease
- Able to identify and manage complications after cruciate surgery

Target participants

This is a master level course suitable for veterinary surgeons with previous experience in small animal orthopedic surgery. Prior attendance at an AO Principles of Fracture Management course is required.

Event fee

USD 1,600.–
